## **Take Back Control**

- **Many modern sports cars have exhaust bypass valves controlled by the vehicle. Now, you can control the time and place to open or close them**
- **With a touch of a button on the remote, you can decide to force the valves open at all times, closed at all times, or have normal operation with the valves under vehicle control**
- **Compatible with most vehicles that have vacuum actuated exhaust bypass valves such as Ferrari, Maserati, Aston Martin, Camaro, Corvette and others**
- **Open or close the exhaust bypass valves at any speed or engine RPM and return control back to the vehicle any time to reduce noise when appropriate**
- **Enjoy the classic sound of your car at all times**
- **Ideal for track days when you want a fully opened exhaust. Some tracks have noise restrictions. With the Always Closed function, you can force the valves closed to comply with these restrictions.**
- **Controller includes remote control transmitter and can also be configured to use a manual On/Off switch in the passenger compartment**
- **Plug-and Play install — no modification to vehicle wiring, no wire splicing and installation is completely reversible — No CEL Codes**
- **Improved functionality compared to Capristo for half the cost**

## **Exhaust Bypass Valve 3-Way Controller**
