## Corvette C6 Install Tips for 2-Way Controller

### Important Note:

Installation tips generated from personal feedback from customers. Results are not guaranteed and are provided as a suggestion only.

### Accessing the Fuse Block

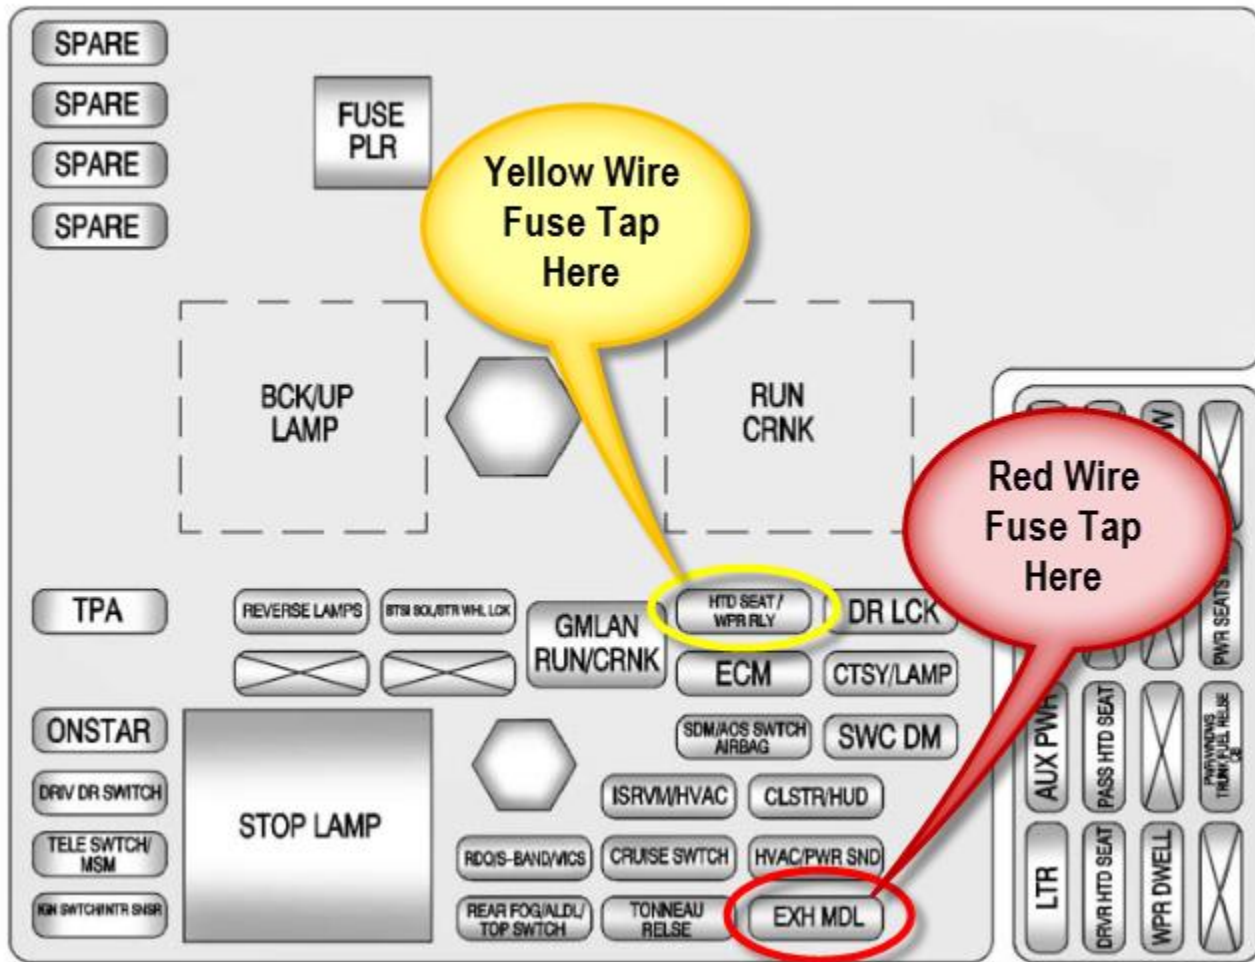

The instrument panel fuse block on the Corvette is located on the passenger side of the vehicle, under the instrument panel and under the toe-board on the passenger side of the car.

Remove the carpet and toe-board covering to access the fuse block by pulling at the top of each corner of the panel.

Open the fuse block cover to access the fuses.

*Caution: Some fuses may be continuously "hot" and not switched with the ignition. Take care to avoid shorting any connections.*

Install fuse taps at these locations with lead wires oriented left and fuses on fuse taps oriented up.

### Potential Controller Module Installation

Any location near the fuse block is good for installing the controller module.
